

TWO SOLUTIONS FOR THE PERFECT REPLACEMENT

WE LAUNCH THE OEM VERSION FOR SAF AXLES

We have two versions of bearings for the replacement of SAF platforms.

The OEM version is ideal for workshops and fleets with their own tools seeking a more cost-effective solution.

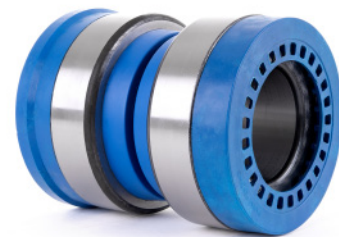

We also have the version patented by Fersa. Our parts are pre-greased, readjusted and come with the tools adapted to the part to facilitate and speed up the replacement.

Both versions have all the necessary components for the replacement: seals, union ring and grease.

OES Version

- Competitive in cost.
- Ideal for workshops with their own assembly tools.

Version patented by Fersa

- Pre-greased.
- Includes mounting hardware.
- Quick assembly.
